

Individual Architecture

aerosun® 3-POINT SUN SAIL

 made in Germany

aeronautec

Segel und textile Architektur

Setting Sails

The membranes of each sail are very durable, water- and dirt repellent and also UV-resistant. With this sail solution, no concrete foundation is necessary for the tensioning of the mast. aerosun® 3-POINT SUN SAILS are fixed on the building and the ground through intelligent fastening systems and thus optimally tensioned.

We are using intelligent fabrics and sewing threads from the yachting sector, all corners and sides are reinforced by means of peripheral belts, so the sails can withstand high wind loads up to 8 beaufort. All accessories such as masts, shackles, fixations and anchors are made of stainless steel. The assembly and disassembly of the shading sails only takes a few minutes and can be carried out without any difficulty.

In Detail

aeronautec develops and fabricates technical textiles. The results are extraordinary complete solutions in textile architecture.

For our shading solutions we are only using high-quality membranes that have their origin in the yachting sector. Most of our elements are uniquely made by our specialists in Seon, developed, manufactured and refined according to static demands. Here we cooperate with local partners.

The aerosun® 3-POINT SUN SAIL combines sophisticated materials and processing with highest aesthetic demands.

rope made of
stainless steel

■ high-quality membrane

■ high-strength straps

Regional Production

Experience service from one source. After an optional on-site 3D scan, conception and customization of your aerosun® 3-POINT SUN SAIL, we are assembling with our own team, because we understand our work as an integral process.

Each sun sail is adopted to local conditions and requirements and the size of the shading space. Also the altitude of the sun in different times of the year plays an important role - so you can enjoy your comfort zone in all kinds of weather.
